

CALL FOR PAPERS

WWW 2017 Systems and Infrastructure Track

The Systems and Infrastructure track at WWW 2017 invites papers related to the architecture and construction of systems and infrastructure underlying Internet services that operate at a global scale.

Topics of interest include but are not limited to:

- Cloud computing.
- Challenges and support for outsourcing computations to the cloud.
- Highly available and reliable data centre systems.
- Transactional systems and models for data centres.
- Distributed storage and caching, CDNs.
- Energy efficiency in data centres.
- Self-organizing, autonomous, and federated data centre and cloud systems.
- Managing, debugging, and diagnosing problems in data centre systems.
- Virtualization and resource management for data centres.
- Data centre networking and its interplay with data centre systems.
- Experience with deployed/operational data centre and cloud systems.
- Infrastructure for big data computations/analytics.
- Economics of cloud computing.

For more information about the World Wide Web conference, please see the conference website (<http://www.www2017.com.au/>) or the general call for papers (<http://www.www2017.com.au/about/call-for-papers.php>).

Track Chairs

Contact: infrastructure-www-2017@googlegroups.com.

- Dennis Fetterly (Google)
- Christopher Rossbach (UT Austin, VMware Research Group)

Timeline

- October 19, 2016 - Abstract submission deadline.
- October 24, 2016 - Full paper submission deadline.
- December 21, 2016 - Notification.
- January 18, 2017 - Camera ready papers due.
- April 3-7, 2017 - WWW 2017 Conference in Perth, Australia.
